CRYPTO ENTRY RECOMMENDATION \$5,000 or 2x or 10x these numbers

(If you have less then invest less, invest \$500 or \$100 at these percentages, it IS possible to buy fractions of cryptos). It matters more that you just GET IN than that you do it with a huge amount of \$\$\$. Just keep buying in every time you can.

FIRST A LITTLE HISTORICAL CONTEXT: I hope you have noticed what recently happened with Turkey. They are only the most recent country that is facing a run away financial meltdown. Before that was Venezuela and before that was Zimbabwe. And this has been a regular occurrence throughout history. Think it can't happen here? Think again. Recent record drops in the stock market and FANGS stocks like Facebook tell the story of an economy that is not as rosy as it seems. But you won't hear anything useful from the TV Networks. They do not have your best interests at heart. They are not to be trusted. The only reason I even listen to them ever is to know what lies they are telling. Yes, there are a few facts in there - such as the ones about Turkey. But they will never tell you even a small bit of the whole story. Here's a great blog post that lays it out in very real-life terms:

<https://thefinanser.com/2018/08/national-currencies-fail-cryptocurrencies-rise.html/>

A BRIEF CASE FOR CRYPTOCURRENCIES

I assume that if you are here you already know the tech of Blockchain (the code behind cryptocurrencies, crypto for short) is world-changing. In case you don't already know; nearly every bank, and Government, as well as Facebook and most fortune 500 companies are busy trying to build - and investing Millions if not Trillions in - their own blockchains with their own currencies. This should tell you 2 things:

- 1) Crypto is the way of the future. It has literally already been decided because this is what all the companies, banks and Governments are already investing in.
- 2) This should make you even MORE committed to buying the free market cryptos (that I am recommending in this report). If we are all going towards crypto, you can guarantee that banks, governments and corporations DO NOT WANT free trade currencies. They want ones that they can control. The currencies they will create will be

controlled and used in an attempt to control you and everything you do. If they have control then they can easily switch you off and take your coins. This is a scary dystopian future that belongs in a sci-fi story NOT your life.

If you hold and control your own money then you hold and control your own fate, it's that simple. Bitcoin was originally created by a mythical figure who calls himself Satoshi Nakamoto (I believe an actual group of people and not one individual). The original intent was stated in the White Paper for Bitcoin to be a peer-to-peer cash money that belonged to the people for the people. The free market coins are the ones you want, but it is a treacherous world out there with literally THOUSANDS of cryptos. I estimate that at least 50% of these are serving a centralized control agenda, so be careful who's pond you fish in, and especially who you give you personal data to.

Personally, I have given some of my data to a few crypto exchanges. There is literally no way around this because US laws require it. This crypto-verse is untravelled territory, so I just recommend being as guarded and careful with your info as you possibly can.

CRYPTOCURRENCY STRATEGY

If I had \$5,000 today and wanted to enter crypto I would buy the following list of coins/tokens. I am using \$5,000 because I believe this is a good amount that may not scare new investors to death and which could show life-changing returns over the next year. But I would recommend more if you have it. If it was me, I would invest as much as I possibly could into crypto. This is actually what I did in 2016 because I knew what it would become. I also invested in Silver bullion coins (Silver Eagles are safest), which I also recommend. The basic strategy I use with Silver is that historically it has taken 300 ounces of silver to buy a medium sized house, so this is a benchmark to use in deciding how much you should hold. But if you have to choose between silver and crypto I would go 20% Silver and 80% crypto. This is just my strategy, but silver will also be VERY important in the future.

I am vastly ahead of the various Psychics and remote viewers who make crypto predictions. I am not saying they don't have good information, I am sure some of it is excellent and may cover areas that I do not. I am just saying that I put my money where my mouth is back in 2016 - far, far, far in advance of any other psychics and remote viewer who have only been in the game since 2018, when, in my opinion it was obvious to anyone who is smart that crypto was going to be HUGE. Just for the record, I first heard about Bitcoin in 2010 and almost bought some when it was \$3 (I'm slapping my forehead now about that one). But I allowed myself to be talked out of it by a friend whom I considered to be more tech savvy than me. Ugh! I will never do that again. I recommend to you that if you are confused or afraid just sit down and meditate. Ask yourself if this is what you should do. Then trust your intuition. You will know what is right. When I got into crypto in 2016 my guides were practically screaming at me to DO IT NOW. So I did.

I have prospered from my foresight, and I want to help you do the same. The psychics only entered the crypto space and started making predictions in 2018, very recently. I

am also literally one of only a handful of women who were navigating the crypto space back in 2016. I don't know why women have been slow to the game, but I want to change that now. In fact I continue to put all spare money into it. But I do currently already hold a good crypto position.

I entered crypto at the end of 2016 and it has changed my life, but not made me financially free - yet. I do expect that I will become financially free sometime in the next 12 months due to crypto because I think that 2018 will show BETTER GAINS than 2017, even if only at the very end of the year. My personal #1 goal from crypto is to become financially free.

These are my recommendations:

.1 BITCOIN if you feel the need to buy the granddaddy coin that is legacy Bitcoin (BTC)

(this is optional because I believe all of the rest I have listed below will out perform Bitcoin. If you do NOT buy Bitcoin then add this dollar amount to either Bitcoin Cash or Litecoin or split between them. I personally favor Bitcoin Cash.

2 Bitcoin Cash

10 Litecoin

4 Etherium

HOW TO GET INTO CRYPTO

Getting in can be scary and daunting and technically overwhelming. So, now imagine what it was like 2 years ago when there was almost no instruction or easy way to get in. That's when I entered the Marketplace. And I had to figure it all out and get into technical aspects of it that I didn't even understand. But I did it anyway and I recommend that you do the same - even if you feel like you are over your head. YOU CAN DO IT!! I will give you my best thoughts on how to easily get in yourself now and give you the benefit of my experience. If you'd like to see some videos I made about traveling the high seas of the crypto storms then here is my Youtube channel:

https://www.youtube.com/channel/UCNcj9e9oO5ikeAXwl-ZORSg?view_as=subscriber

And here is a video I did with Roger Ver - one of the earliest figures in Bitcoin and an icon of the crypto world. I interviewed him at Anarchapulco, a cryptocurrency conference that takes place every February in Acapulco:

<https://www.youtube.com/watch?v=ZHMMIBUnEUA&t=3s>

My #1 recommended and preferred method for getting Bitcoin and Bitcoin Cash is to simply go to Bitcoin.com and download their wallet and buy with your Credit/Debit card. It is easy, it is fast and Bitcoin.com provides a great newsletter and set of informational emails that will help you to understand the basics of crypto. This is also Roger Ver's company.

A word about ETH (Etherium). This coin has been the first to establish itself as the platform on which new crypto businesses are being built. The businesses on the ETH network use TOKENS and not COINS. The cryptos I listed above are COINS. The Tokens are for the new blockchain based businesses that will begin to emerge into the public awareness in the next 6 months. These Etherium tokens are called ERC-20 tokens and last summer there was something of a frenzy of fundraising taking place in the world of crypto for various Blockchain businesses. This type of fundraising is called having an Initial Coin Offering - ICO for short. This name is taken from the investment world where they have traditionally raised funds with an IPO - Initial PUBLIC Offering. You need to understand this in order to understand that the main way to buy these TOKENS is with your ETH that you have bought.

You should also know that other networks are soon to become (or already are) platforms for businesses to build on, including Bitcoin Cash and Bitcoin. Neo is another such platform that is mainly based in China and would also be a good coin to own. But for the purpose of this report I am trying to keep it simple.

STEP TWO - HOW TO BUY TOKENS ONCE YOU HAVE SOME COINS

In order to buy the ERC-20 TOKENS that represent the various Etherium based businesses you will need to go to an EXCHANGE. There are many of them and most of them are centralized and it takes a long time to get an account on some of them because they need to verify your identity (and they keep those records on file so that you can be taxed). I prefer decentralized exchanges where you can buy and sell anonymously. But they are more technically challenging to use. I will explain how to use the REGULAR CENTRALIZED exchanges here. If you want to know how to use the others then call or email me and we will set up an appointment for me to walk you through it.

Here are some exchanges that I recommend, and between them you should be able to buy everything that I recommend below. For all of these, all you need to do is go there and open an account. That process will walk you through all the steps you need to start trading. If you have questions about how to send coins then go to YouTube and search it. There are tons of great videos on that subject already.

CoinEx
Cex.io
Binance

Also Gemini.com - they ONLY trade BTC and ETH so far, but for me they are the easiest and fastest way to sell crypto into \$\$ and get it in my bank account the next day. This is the best option for US citizens so far. Hopefully better solutions are on their way soon. But for now, this is the best OFFRAMP that exists in crypto. This is very important because we always need to be able to TAKE PROFITS from our investment. Crypto is volatile. It goes up suddenly and then goes down even faster. When you make a lot of money, you need to take some off the table - this is how you lock in profits. There are

always opportunities to buy back in again later, usually at a drastically lower price. The hardest thing for me to learn how to do was to take profits. I am still not very good at it, but it *must be part of your strategy*. Don't make the same mistake I did!

IMPORTANT NOTE: Please do NOT keep your crypto on the exchanges. Just send some coins there, make your trade then send your tokens off to your wallet which should ideally be kept on a Nano Ledger or other hardware device that only you have access to. You can also print your cryptos out and keep them as a physical asset. There are tutorials on YouTube that will teach you how to do this. **SAVE AT LEAST 3 COPIES OF YOUR PRIVATE KEYS** - all in different places.

I recommend you KEEP at least one ETH and invest the other three as follows:

- .5 of an ETH into VERI
- .5 of an ETH into Populous
- 1 ETH into THETA
- 1 ETH into DGB

If you have more money then double the above numbers. These are all coins that I feel need to be accumulated in as large of amounts as you possibly can, with the exception of DGB since you will have a LOT of these, but since they are only about .04 cents each these are tokens that really have a lot of room to grow.

A WORD ON VERITASIUM (VERI) AND POPULOUS (PPT) - these are two tokens that will pay DIVIDENDS. Soon they will both be set up to rent out and EARN A RELATIVELY PASSIVE INCOME FROM. This is my idea of the perfect investment. I want my investments to pay for my lifestyle. This is why I recommend both of these HIGHLY. Another way to create passive income is through CRYPTO MINING - but this is another subject, beyond the scope of this report. It is not my area of expertise but I have a friend to interview for you about it. it would be a separate investment, so bear that in mind if you are interested in Mining.

BITCOIN CASH - a few words on BCH. The debate between BTC (Bitcoin Core) and BCH (Bitcoin Cash) is a very heated one and there are many harsh words to be found online. Do not let the viciousness distract you. You need to know that there are a HUGE number of paid trolls out there using every trick in the book to scare you away from BCH - which I believe is the real Bitcoin.

Meanwhile BTC will still go up in value, probably a lot. This is because the banksters have taken over the team that develops the code for BTC and are creating a system to control - or at least slow down - the whole crypto marketplace. Ultimately BCH will have a LOT of room to grow as I see it eventually overtaking BTC. **HOWEVER** - BCH may be the MOST VOLATILE coin in the whole market over the next months. Volatile is good if you have nerves of steel and want to take high-risk, high-reward trades. If you have a weak stomach or prefer more conservative safe strategies then just buy and hold the coins above. DO NOT GET SCARED by the huge and wild swings that will be made by BCH (or the rest of crypto for that matter).

HIGH RISK TOLERANCE - I personally have a very high risk tolerance (but not over the edge into foolishness) and for this reason I have an aggressive wealth-building strategy in place for trading a percentage of my BCH in order to accumulate more. If you want to know what my numbers are for these trades then here is an article I wrote on Yours.org back in the beginning of 2018 at a time when I was one of the rare few who expected Bitcoin Cash to overtake Bitcoin. There were NO psychics or remote viewers predicting it then. That article lays out how I see it and why (the numbers are behind the paywall):

<https://www.yours.org/content/bitcoin--btc--vs-bitcoin-cash--bch----why-the-traders--and-everyone-e-1079d2553f4a>

As always, remember - YOU TRADE AT YOUR OWN RISK. EVERY FINANCIAL CHOICE YOU MAKE IS YOUR OWN AND I AM NOT RESPONSIBLE FOR THEM. DO YOUR OWN RESEARCH!!! YOU CLICK THE MOUSE, YOU MAKE THE PURCHASES, YOU TAKE THE RISKS AND YOU GET THE REWARDS OR LOSSES.

I am merely sharing my vision and strategy with you. This is exactly what I myself intend to do or would do if I were entering crypto today. If I were to enter today I would want a strategy that holds a large amount of stable money that I can be almost certain will grow - these are LTC, BCH, VERRI and PPT. I am equally certain that DGB and THETA will grow but they are more risky and unknown in terms of return. Ultimately they could multiply more than the more expensive coins/tokens or they could barely do anything. This is why I chose the amounts I did for them.

I would also want a coin that I could aggressively trade in order to increase my position significantly at this time in the game, that aggressive position would be my trades in Bitcoin Cash. Nobody needs to do this. I expect huge returns even without doing any trading, however my past year of intense studying of the marketplace has me 99% certain that I can make very large gains with my BCH trading strategy.

A WORD ON TRADING - I am NOT a trader. I actually DO NOT recommend trading in the world of Crypto because it is more crazy than regular marketplaces. But if you do want to learn to trade crypto ask me and I will give you people I recommend to help you make money. Just remember that statistically INVESTORS OUTPERFORM TRADERS. In other words, the profitable strategy is almost always to just BUY AND HOLD the good coins/tokens.

A WORD ON STRATEGIC INVESTING - I consider myself a STRATEGIC INVESTOR. I am NOT a trader. I do not study fractal wave patterns or Elliot Waves, but I have a basic understanding of them. I do NOT trade by the book - any book. I trade by the complicated interplay between all the many forces that are pushing this entire market back and forth. When I make a play it is not very often, but it is because I believe in an underlying force that is changing the tides of the crypto ecosystem, not because I am chasing the foam at the top of the waves the way that traders do. There are traders that make money this way, but most lose their shirts so I do NOT do it that way. Also,

because I trade based on underlying forces - and massive amounts of research - I was able to trade a significant position into Bitcoin Cash and hold that asset when it outperformed everything else in the marketplace. It is not done yet, not by a long shot.

Good luck and may your seeds planted today grow into huge money trees.
